THE PHARMACY INVENTORY AND SALES MANAGEMENT SYSTEM

System Data Dictionary and Schema Documentation

1. USERS

- The users table stores staff profile details and access security roles.

Column Name	Data type	The key type	Description
UserID	Int	Primary Key	Unique identifier for each system user/ staff member
FullName	Char	-	The complete legal name of the staff member
UserName	Char	-	Unique handle used by staff members to log into the system
Password	Char	-	Secure authentication hash for access to the system
Role	Char	-	Access level e.g. Manager, Pharmacist, Cashier

2. CATEGORIES

- The categories table organizes medications into logical classification groups.

Column Name	Data type	Key type	Description
CategoryID	Int	Primary key	Unique identifier for each drug category
CategoryName	Char	-	Name of the category e.g. Antibiotics
Description	Char	-	Brief details about the type of medications in the category

3. DRUGS

- This table holds the master catalog of general medications.

Column name	Data type	Key type	Description
DrugID	Int	Primary key	Unique identifier for each drug
CategoryID	Int	Foreign key	Links the drugs to their parent category in the **CATEGORIES** table
GenericName	Char	-	The official generic name of the drug
BrandName	Char	-	The commercial brand name for the drug
UnitMeasure	Char	-	Measurement unit for dispensing e.g. tablets, bottles
UnitPrice	Float	-	Standard base selling price per unit

4. SUPPLIERS

- This table tracks the pharmaceutical vendors and manufacturers who deliver inventory batches.

Column Name	Data type	Key type	Description
SupplierID	Int	Primary key	Unique identifier for each supplier
SupplierName	Char	-	Official business name of the pharmaceutical supplier
ContactPerson	Char	-	Name of the primary sales rep or account manager
PhoneNumber	Char	-	Direct contact number for ordering and logistics
Email	Char	-	Official email for sending purchase orders
Address	Char	-	Physical location address of the supplier

5. INVENTORY BATCHES

- This table tracks physical stock deliveries, pricing variations per batch, expiries and supplier sources.

Column Name	Data type	Key type	Description
BatchID	Int	Primary key	Unique identifier for each stock batch entry
DrugID	Int	Foreign key	Links the batch to the specific master drug in the **DRUGS** table
SupplierID	Int	Foreign key	Links the batch to the specific vendor in the **SUPPLIERS** table who delivered it.
BatchNumber	Char	-	The manufacturer's physical batch number printed on the package
QuantityRecieved	Int	-	Total units delivered in this specific shipment.
QuantityLeft	Int	-	Remaining stock units left in its batch.
MFD	Date	-	Manufacturing date of the batch.
ExpiryDate	Date	-	Expiration date used to enforce FIFO expiry management.
UnitPrice	Float	-	Cost or selling price specific to its shipment batch.

6. TRANSACTIONS

- This table records the checkout metadata and ties the sales to staff for accountability.

Column name	Data type	Key type	Description
TransactionID	Int	Primary key	Unique identifier for each checkout session.
UserID	Int	Foreign key	Tracks which staff member processed the transaction
TimeStamp	Timestamp	-	Exact date an time when the checkout happened
TotalAmount	Float	-	Total financial sum for the checkout receipt
PaymentMethod	Char	-	Mode of payment used (cash or mobile money)

7. SALE_ITEMS

- This is the junction table mapping transaction receipts to exact drug batches sold and automatically deducting stock quantities.

Column name	Data type	Key type	Description
SalesItemID	Int	Primary key	Unique identifier for each line-item row.
TransactionID	Int	Foreign key	Links the item to its parent checkout receipt
BatchID	Int	Foreign key	Links the line-item to the precise inventory batch being depleted,
QuantitySold	Int	-	Number of units purchased for this specific drug batch.
Subtotal	Float	-	Calculated line cost (QuantitySold * UnitPrice)

APPENDIX

- **INT (Integer)**: Stores whole numbers without decimals.
- **CHAR (Character)**: Stores text strings, symbols and alpha numeric characters e.g. @, #, etc.
- **FLOAT**: Stores numbers with fractional parts/ decimals used for values like prices, subtotals and totals.
- **DATE**: Stores calendar dates in standard format e.g. dates used for tracking manufacturing and expiry dates.
- **Timestamp**: Stores both the exact date and time, for example those used for chronological tracking of checkout sessions.
